SUMMARY

Staff engineer with 8+ years building product UI at scale for Intuit, Walmart, and Rivian. Led the One Intuit Brand rollout across 50+ teams and built core components of the design system behind 3,000+ microfrontend plugins. Full-stack across React, TypeScript, Next.js, GraphQL, and Node/Java, with recent focus on agentic AI and MCP.

EXPERIENCE

• Intuit, Mountain View, CA

Staff Software Engineer — Intuit Design System

Aug 2025 – Present

- Led the One Intuit Brand rollout 0-to-1, from PRD to production: one design-system release that rebranded Intuit's products, coordinated across 50+ teams in 5 business units.
- Built and maintained 67 core components powering QuickBooks, TurboTax, Credit Karma, and Mailchimp (100M+ customers). The library is the default UI kit for 3,000+ microfrontend plugins.
- Built the conversation UI and streaming responses for Intuit Intelligence, and the migration path that made it Intuit's default AI assistant across 10+ surfaces, replacing Apollo and Intuit Assist.
- Developed a theming layer letting each of 4 products apply its own brand to the shared components.
- Built the Figma plugins every Intuit designer uses, syncing design tokens and component specs from the library, and extended them into AI-assisted design-to-code.
- Set the library's quality bar with Jest unit and Playwright/Cypress integration tests and Storybook docs; run weekly office hours, mentor engineers, and own production SLAs as on-call.

Senior Software Engineer — Frontend, Identity & Auth

Dec 2022 – Aug 2025

- Shipped passkey registration and a centralized post-auth surface across 8 Intuit products, lifting passkey adoption 3.5x, to 88% of active customers; added digital ID verification with mDL and passport.
- Architected Intuit's first cross-identity SSO: embedded QuickBooks inside Amazon's domain with Intuit authentication handled cross-domain, now the canonical partnership-onboarding pattern, driving 100K+ new subscribers.
- Led 8 engineers migrating 40 REST endpoints across sign-in, sign-up, and account-manager flows to GraphQL for Identity 2.0.
- Cut P95 latency 56% in login experiences (8s→3.5s, 11s→7.2s) via bundle splitting, lazy loading, and render optimization.
- Prototyped LLM-powered agentic workflows against production identity APIs; defined MCP-based authentication for non-human principals, now the basis for 3 teams' agentic experiences.
- Built AI coding tools, including plugins, commands, and agent workflows, adopted by 150+ developers across the Identity org, raising developer velocity ~3x.

• Rivian Automotive, Palo Alto, CA

Senior Software Engineer — Full Stack, Fleet Core

Mar 2022 – Dec 2022

- Founding engineer on Fleet Core; architected Rivian's event-driven fleet notifications system in Node.js and TypeScript on WebSockets, SQS, and EventBridge, processing millions of events per day across thousands of commercial vehicles.
- Built the fleet-management web app end to end: data-heavy dashboards and real-time vehicle alerts for first customer Amazon.

• Walmart Global Tech, Sunnyvale, CA

Senior Software Engineer — Marketplace & User Generated Content (UGC)

Jan 2021 – Mar 2022

- Re-platformed the third-party seller experience on GraphQL, React, TypeScript, and Next.js, from homepage and search through checkout, for 3.1M+ shoppers.
- Built seller ratings and reviews, ranked the #1 feature in Q2 2021, and redesigned the star-rating component for ADA compliance, cutting the item page bundle 10%.

Software Engineer — Walmart Core Components

Jan 2020 – Jan 2021

- Owned Walmart's shared React component library and banner theming for Walmart.com, Sam's Club, and Marketplace.

Software Engineer — Wireless Verticals & Baby Registry

Jul 2018 – Jan 2020

- Launched Baby Registry with 100K registrants in 30 days; first team at Walmart to adopt TypeScript (Tech Evangelist Award).
- Optimized the PDP buy-box for a 15% page-speed gain and a 30bps conversion lift.

EDUCATION

• M.S. Software Engineering, Arizona State University, Tempe, AZ

May 2018

• B.E. Computer Engineering, K.J. Somaiya College of Engineering, Mumbai, India

May 2016

SKILLS

- **Languages:** JavaScript, TypeScript, HTML, CSS, Java, SQL, GraphQL
- **Frameworks & Tools:** React, Redux, Next.js, Node.js, Spring Boot, Storybook, D3.js, Jest, Playwright, Cypress, Figma API
- **Infrastructure:** AWS (Lambda, S3, CloudFront, SQS, EventBridge), WebSockets, Splunk, Grafana, Datadog
- **Domains:** Frontend Architecture, Web Performance, Design Systems, Accessibility (WCAG), Identity & Auth, Agentic AI & MCP
