SUMMARY

Web Engineer with 8+ years building high-scale frontend experiences in React, TypeScript, and GraphQL — design systems, passkey authentication, component libraries, and agentic/LLM tooling serving 100M+ customers across Intuit, Walmart, and Rivian.

EXPERIENCE

- **Intuit, Mountain View, CA**

- **Staff Software Engineer — Intuit Design System**

Jan 2024 – Present

- Built and maintained 100+ reusable components powering QuickBooks, TurboTax, Credit Karma, and Mailchimp, serving 100M+ customers.
 - Developed a theming layer letting each of the 4 products apply its own brand to the shared component set, eliminating per-product forks.
 - Created internal Figma plugins syncing design tokens and component specs into the library, plus AI-assisted design-to-code tooling.
 - Owned the library's Storybook and its production SLAs as primary on-call, covering usage and accessibility guidance.

- **Senior Software Engineer — Frontend, Identity Authentication Experiences**

Dec 2022 – Jan 2024

- Shipped passkey registration, post-enrollment education, and a centralized post-auth surface across 8 Intuit products, lifting adoption from 10% to 26% of active customers.
 - Shipped digital ID (mDL) verification, letting customers verify with the license already in their phone's wallet instead of uploading a document photo.
 - Built Intuit's first cross-identity SSO: embedded QuickBooks inside Amazon's domain with Intuit authentication handled cross-domain — now the canonical partnership-onboarding pattern, driving 100K+ new subscribers.
 - Migrated 40 REST endpoints spanning 20 signup and account-manager flows to GraphQL for Identity 2.0, leading 8 engineers across backend, frontend, and product — 85% GTM velocity gain.
 - Built LLM-powered prototypes running agentic workflows against production identity APIs; defined MCP-based authentication for non-human principals, now the basis for 3 teams' agentic experiences.
 - Cut P95 latency 56% (8s to 3.5s account selector; 11s to 7.2s account manager) via bundle splitting, lazy loading, and render optimization.
 - Ran the frontend org's AI-assisted engineering practice — workshops on Claude, Skills, and agents, yielding an estimated 3x velocity gain.

- **Rivian Automotive, Palo Alto, CA**

- **Senior Software Engineer — Full Stack, Fleet Core**

Jan 2022 – Jul 2022

- Founding engineer on Fleet Core; built Rivian's event-driven fleet notifications system on WebSockets, SQS, and EventBridge.

- **Walmart Global Tech, Sunnyvale, CA**

- **Senior Software Engineer — Marketplace & User Generated Content (UGC)**

Jan 2021 – Jan 2022

- Re-platformed the 3P seller experience on GraphQL, React, TypeScript, and Next.js for 3.1M+ customers; ratings and reviews ranked #1 feature in Q2 2021.
 - Architected end-to-end seller workflows across homepage, search, item page, cart, and checkout.
 - Redesigned the star-rating component for ADA compliance, cutting bundle size by 10%.
 - Built the seller email routing system with buyer email masking, removing the dependency on external email clients.

- **Software Engineer — Walmart Core Components**

Jan 2020 – Jan 2021

- Built and maintained 100+ reusable components used across Walmart.com, Sam's Club, and Marketplace.
 - Added a theming layer for the different Walmart banners and owned the team's Storybook as the shared component reference.

- **Software Engineer — Wireless Verticals & Baby Registry**

Jun 2018 – Jan 2020

- Launched Walmart Baby Registry — 100K registrants in 30 days; first team at Walmart to adopt TypeScript (Tech Evangelist Award).
 - Optimized the PDP buy-box for a 15% page-speed gain and a 30bps conversion lift.

EDUCATION

- **M.S. Software Engineering, Arizona State University, Tempe, AZ**

May 2018

- **B.E. Computer Engineering, K.J. Somaiya College of Engineering, Mumbai, India**

May 2016

SKILLS

- **Languages & Frameworks:** JavaScript, TypeScript, Java, SQL, GraphQL, React, Redux, Next.js, Storybook, Angular, D3.js, Node.js, Spring Boot
- **Infrastructure & Domains:** AWS (SQS, EventBridge, Lambda, Cognito), WebSockets, Splunk, Datadog, Webpack; Identity & Auth, WebAuthn/Passkeys, Design Systems, AI & LLM Prototyping
