## SUMMARY

---

Software Engineer with 8+ years building identity, design systems, and AI-native experiences at scale — GraphQL platforms, passkey authentication, and component libraries serving 100M+ customers.

## EXPERIENCE

---

- **Intuit, Mountain View, CA**

- **Staff Software Engineer — Intuit Design System**

*Jul 2022 – Jan 2024*

- Built and maintained 100+ reusable components powering QuickBooks, TurboTax, Credit Karma, and Mailchimp.
    - Built a theming layer letting each product apply its own brand to the shared component set, eliminating per-product forks.
    - Built internal Figma plugins syncing design tokens and component specs into the library, plus AI-assisted design-to-code tooling.
    - Owned the library's Storybook and its production SLAs as primary on-call, covering usage and accessibility guidance.

- **Senior Software Engineer — Frontend, Identity Authentication Experiences**

*Jan 2024 – Present*

- Shipped passkey registration, post-enrollment education, and a centralized post-auth surface across 8 Intuit products, lifting adoption from 10% to 26% of active customers.
    - Built Intuit's first cross-identity SSO: embedded QuickBooks inside Amazon's domain with Intuit authentication handled cross-domain — now the canonical partnership-onboarding pattern, driving 100K+ new subscribers.
    - Migrated 40 REST endpoints spanning 20 signup and account-manager flows to GraphQL for Identity 2.0, leading 8 engineers across backend, frontend, and product — 85% GTM velocity gain.
    - Built LLM-powered prototypes running agentic workflows against production identity APIs; defined MCP-based authentication for non-human principals, now the basis for 3 teams' agentic experiences.
    - Cut P95 latency 56% (8s to 3.5s account selector; 11s to 7.2s account manager) via bundle splitting, lazy loading, and render optimization.
    - Ran the frontend org's AI-assisted engineering practice — workshops on Claude, Skills, and agents, yielding an estimated 3x velocity gain.

- **Rivian Automotive, Palo Alto, CA**

- **Senior Software Engineer — Full Stack, Fleet Core**

*Jan 2022 – Jul 2022*

- Founding engineer on Fleet Core; built Rivian's event-driven fleet notifications system with a team of 4.

- **Walmart Global Tech, Sunnyvale, CA**

- **Senior Software Engineer — Marketplace & User Generated Content (UGC)**

*Jan 2021 – Jan 2022*

- Re-platformed the 3P seller experience on GraphQL, React, TypeScript, and Next.js for 3.1M+ customers; ratings and reviews ranked #1 feature in Q2 2021.
    - Architected end-to-end seller workflows across homepage, search, item page, cart, and checkout.
    - Redesigned the star-rating component for ADA compliance, cutting bundle size by 10%.
    - Built the seller email routing system with buyer email masking, removing the dependency on external email clients.

- **Software Engineer — Walmart Core Components**

*Jan 2020 – Jan 2021*

- Built and maintained 100+ reusable components used across Walmart.com, Sam's Club, and Marketplace.

- **Software Engineer — Wireless Verticals & Baby Registry**

*Jun 2018 – Jan 2020*

- Launched Walmart Baby Registry — 100K registrants in 30 days; first team at Walmart to adopt TypeScript (Tech Evangelist Award).
    - Optimized the PDP buy-box for a 15% page-speed gain and a 30bps conversion lift.

## EDUCATION

---

- **M.S. Software Engineering, Arizona State University, Tempe, AZ**

*May 2018*

- **B.E. Computer Engineering, K.J. Somaiya College of Engineering, Mumbai, India**

*May 2016*

## SKILLS

---

- **Languages & Frameworks:** JavaScript, TypeScript, Java, SQL, GraphQL, React, Redux, Next.js, Storybook, Angular, D3.js, Node.js, Spring Boot
- **Infrastructure & Domains:** AWS (SQS, EventBridge, Lambda, Cognito), WebSockets, Splunk, Datadog, Webpack; Identity & Auth, WebAuthn/Passkeys, Design Systems, AI & LLM Prototyping
